PROFESSIONAL SUMMARY

Back-End Developer with over 4 years of experience designing, developing, and deploying scalable cloud-based applications across fintech, healthcare, SaaS, and e-commerce domains. Proficient in Node.js, Nest.js, Express, Hono, .NET Core, PostgreSQL, MongoDB, and multi-cloud environments including AWS, Azure, GCP, and Cloudflare. Experienced in building RESTful APIs, implementing database security best practices, writing optimised SQL and NoSQL queries, and architecting cloud infrastructure using IaaS and PaaS services. Contributed to open-source tooling and internal developer platforms. Comfortable leading small teams and owning both back-end and front-end layers across full-stack projects.

KEY HIGHLIGHTS

- Architected AWS-native AI platform at Myanmar's largest private bank using Bedrock, Lambda, and EventBridge.
- Led cloud & DevOps strategy across AWS, Azure, GCP, Cloudflare, and Hostinger for Benchmarkaps monitoring system.
- Built and owned both back-end and front-end for 4+ production products across fintech, healthcare, and real estate.
- Implemented ELK Stack (Elasticsearch + Kibana) for real-time performance monitoring and log aggregation.
- Delivered a digital banking MVP (React Native + Node.js back-end) in 2 weeks and its admin panel in under 2 days.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, SQL

Back-End Frameworks & Runtimes: Node.js, Nest.js, Express.js, Hono, Bun, .NET Core

Front-End: React, React Native, Next.js, Angular 8+

Databases: PostgreSQL, MySQL, MSSQL, MongoDB, DynamoDB, Firebase Firestore, Redis, S3 Vector Store

Cloud & DevOps: AWS (Bedrock, Lambda, S3, EC2, ECR, ECS & Fargate, ALB, EventBridge, RDS), Microsoft Azure, Google Cloud Platform (GCP), Cloudflare (Workers, Pages, DNS, WAF), Hostinger VPS, Firebase, Docker, CI/CD Pipelines, Active Directory

Observability & Logging: Elasticsearch, Kibana (ELK Stack), Logstash, Prometheus, Grafana

Tools & Practices: Git, REST APIs, tRPC, OpenAPI/Swagger, Code Review, Agile/Scrum, Database Security, Stored Procedures, SEO Optimisation

WORK EXPERIENCE

Product Engineer — Partipost

Mar 2026 – Present | Singapore (Remote)

- Develop and maintain back-end API integrations for the Partipost mobile application, collaborating closely with the back-end team to define contract schemas and optimise data-fetching patterns.
- Maintain and enhance the Partipost Campaign Manager (CM) web portal used by brands and agencies, handling both front-end rendering logic and API consumption layers.
- Implement responsive UI components and ensure consistent behaviour across web and mobile platforms while contributing to shared component libraries.
- Collaborate with cross-functional teams including product, design, and back-end engineers to ship features on schedule in an agile environment.

Supervising Full Stack Developer — KBZ Bank

Oct 2024 – Mar 2026 | Myanmar

- Architected and led back-end development of the bank's first AI-integrated product using AWS Bedrock, Lambda, S3, and EventBridge, handling both API design and cloud infrastructure provisioning.
- Designed and implemented RESTful APIs and back-end services for the Employee Loan Project, enforcing database security standards and access-control policies.
- Managed end-to-end back-end development, deployment pipeline, and third-party integration for the Earthquake Home Loan Project, overseeing both server-side logic and front-end delivery.
- Upgraded Firebase Cloud Messaging infrastructure from legacy FCM APIs to HTTP v1, improving push-notification reliability and reducing error rates.
- Supervised and mentored a team of front-end developers, conducting code reviews and enforcing coding standards.

Cloud & DevOps Consultant / Full Stack Developer (Contract) — TwoSteps.ai

Apr 2024 – Oct 2024 | Remote

- Served as the most experienced cloud engineer on a team of four, providing hands-on architecture guidance and cloud strategy across AWS, Azure, GCP, Cloudflare, and Hostinger VPS.
- Co-developed and maintained Benchmarkps, an internal performance monitoring system, contributing primarily to the back-end services built with Node.js and Nest.js.
- Designed and implemented the observability stack for Benchmarkps using Elasticsearch and Kibana (ELK), enabling real-time log aggregation, alerting, and performance dashboards.
- Provisioned and managed cloud infrastructure on AWS (EC2, ECS, ALB, RDS) and Azure, automating deployments with Docker-based CI/CD pipelines.
- Defined and enforced database security policies and access-control strategies for PostgreSQL and MongoDB instances running in multi-cloud environments.
- Integrated Cloudflare WAF and DNS management to secure public-facing endpoints and improve availability for the monitoring platform.

Full Stack Developer — MyanCare Telemedicine Co., Ltd.

Feb 2022 – Oct 2024 | Myanmar

- Owned back-end development for the MyanCare TeleHealth App, designing RESTful APIs with Node.js and Express, authoring PostgreSQL stored procedures, and implementing role-based access control and data-encryption policies.
- Handled both front-end (React) and back-end (Node.js, PostgreSQL) layers for the MyanCare TeleHealth App, ensuring consistent API contracts between layers.
- Implemented business logic, database schema migrations, and back-end services for the YinThway Call Center Project; conducted code reviews and mentored peers.
- Led full-stack maintenance of the YCare POS System, resolving critical back-end bugs, optimising SQL queries, and shipping new features end-to-end.
- Built a cross-platform React Native app with a tRPC back-end layer for a Japanese client, managing both front-end and server-side code as sole developer.

PROJECTS

Benchmarkps — Performance Monitoring System

Tech: Nest.js, Node.js, PostgreSQL, Elasticsearch, Kibana, Docker, AWS, Azure, Cloudflare

Co-developed with a team of 4 at TwoSteps.ai. Responsible for back-end API services, the ELK-based observability stack, and multi-cloud infrastructure provisioning. Handled both server-side logic and front-end dashboard integration.

KBZ Bank — AI-Integrated Loan Platform

Tech: AWS Bedrock, Lambda, S3, EventBridge, Node.js, Nest.js, React, PostgreSQL

Led back-end architecture and cloud infrastructure for the bank's first AI product. Designed RESTful APIs, implemented back-end business logic, and supervised front-end team delivery end-to-end.

Meral Myanmar (Digital Banking) (www.meralmyanmar.com)

Tech: React Native, Next.js, Node.js, Express.js, PostgreSQL, Clerk

Designed and built back-end API layer with Node.js/Express and PostgreSQL. Led a junior developer to ship the React Native front-end MVP in 2 weeks. Built the Next.js admin panel in under 2 days, handling both front-end and back-end.

MyanCare TeleHealth App

Tech: Node.js, Express.js, PostgreSQL, React, React Native, tRPC

Owned the full back-end: REST API design, PostgreSQL schema and stored procedures, RBAC, and data-encryption policies. Also contributed to the React front-end, maintaining full ownership across both layers.

Myanmar Ahla Gallery (www.myanmarahla.com)

Tech: Next.js, Node.js, Hono, PostgreSQL, Vercel

Built the Hono-based back-end API and admin dashboard under contract. Handled both server-side data management and front-end landing page.

Magical Face Aesthetic Clinic (proxclinic.com)

Tech: React Native, Node.js, Express.js, MongoDB

Sole developer. Designed the REST API and MongoDB schema, implemented back-end business logic, and built the React Native front-end; delivered on schedule.

Z8 Real Estate

Tech: React Native, TypeScript, Node.js, Nest.js, PostgreSQL

Built Nest.js back-end with PostgreSQL alongside front-end React Native app. Collaborated with a teammate and UI/UX designer to ship Android and iOS MVP.

EDUCATION

BE in Information and Communication Technology

University of Technology (Yadanapon Cyber City) | Jul 2018 – Jul 2021

- Studied computer science fundamentals, algorithms, databases, and software engineering.
- Won second prize in a university Arduino Prototype contest.
- Participated in hackathons and programming competitions.
- Left during the coup in 2021 to pursue a full-time software development career.

LANGUAGES

English, Burmese
